### **DETAILED ACTION**

Applicant's arguments filed 2/27/09 have been fully considered but they are not persuasive. Previous rejections/issues not addressed below have been withdrawn.

#### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 17,18,20,23,24 and 31,33-41 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The term "class Insecta" appears to be new matter.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 17,18,20,23,24 and 31,33-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mainfisch et al (USPN 5852012; 12/22/98) and The Agrochemical Handbook A0891 / Aug 91. Mainfisch teaches an insecticidal composition comprising compounds 1.2 and 1.4 in Table 1 (see column 20 Table 1) which are equivalent to instant compounds A.1 and A.3. Mainfisch teaches that compositions comprising the compounds are made by combining the

compounds with auxiliaries and optionally other actives. See column 15 lines 52-58, column 17 lines 50-67. Mainfisch teaches a method of controlling insects comprising applying the compounds to the pests (insects), crop, seed, foliage, and soil. See column 18 lines 12-49, column 13 line 35 – column 15 line 37. Mainfisch does not teach the composition or method comprising abamectin. However, The Agrochemicals Handbook teaches that abamectin is an insecticide and that abamectin is applied to crops and binds to soils in order to control insects. It would have been obvious to one having ordinary skill in the art to modify the invention taught by Mainfisch to include the abamectin taught by The Agrochemical Handbook. One would have been motivated to do this since each reference has the same utility, i.e. each reference discloses insecticidal inventions and since Mainfisch welcomes the addition of auxiliaries and other actives.

*Response to Applicant's amendment*

The declarations filed contain mixed results, i.e. both synergistic and antagonistic, in Tables 2a, 2b, 2c, 2d and 2e for a combination of abamectin and thiamethoxam. Many of the claims are drawn to "class Insecta" which appears to be new matter. For the above reasons, the rejection is maintained.
